## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 8-14 are allowed.
2. The following is an examiner's statement of reasons for allowance:

U. S. Publication 2004/0178897 to Fennel et al. is the reference closest to the claimed invention. Fennel et al. disclose a method for automatically determining installation positions of wheels in a motor vehicle, the method comprising: receiving tire pressure monitoring system data (TPMS) from a direct measure tire pressure monitoring system, wherein the direct measure tire pressure monitoring system having tire pressure measuring devices and transmitting devices for transferring the TPMS data containing tire pressure values and identification numbers of individual wheels; and receiving deflation detection data from an indirect measuring tire pressure monitoring system determining deflation detection data from rotational behavior of the individual wheels, said deflation data containing pressure changes and installation positions. However, Fennel et al. do not teach determining correlation coefficients from the TPMS data and the deflation data by means of a correlation function; and including all of the other limitations in the respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
